

Gym Studio

by jafar khan

DATABASE

“A database is an organized collection of related data stored electronically for easy access and management.”

TRAINERS

Field	Type	Null	Key	Default
trainer_id	int	NO	PRI	NULL
trainer_name	varchar(50)	NO		NULL
specialization	varchar(50)	YES		NULL
experience_years	int	YES		NULL

PLANS

Field	Type	Null	Key
plan_id	int	NO	PRI
plan_name	varchar(50)	YES	
duration_months	int	YES	
price	int	YES	

MEMBERSHIPS

Field	Type	Null	Key
membership_id	int	NO	PRI
member_id	int	YES	MUL
trainer_id	int	YES	MUL
plan_id	int	YES	MUL
start_date	date	YES	

MEMBER

Field	Type	Null	Key	Index
member_id	int	NO	PRI	PRIMARY
member_name	varchar(50)	NO		
age	int	YES		
gender	varchar(10)	YES		
join_date	date	YES		

EQUIPMENT

Field	Type	Null	Key	Default	Extra
equipment_id	int	NO	PRI	NULL	
equipment_name	varchar(50)	YES		NULL	
quantity	int	YES		NULL	

result 5 x

Objectives

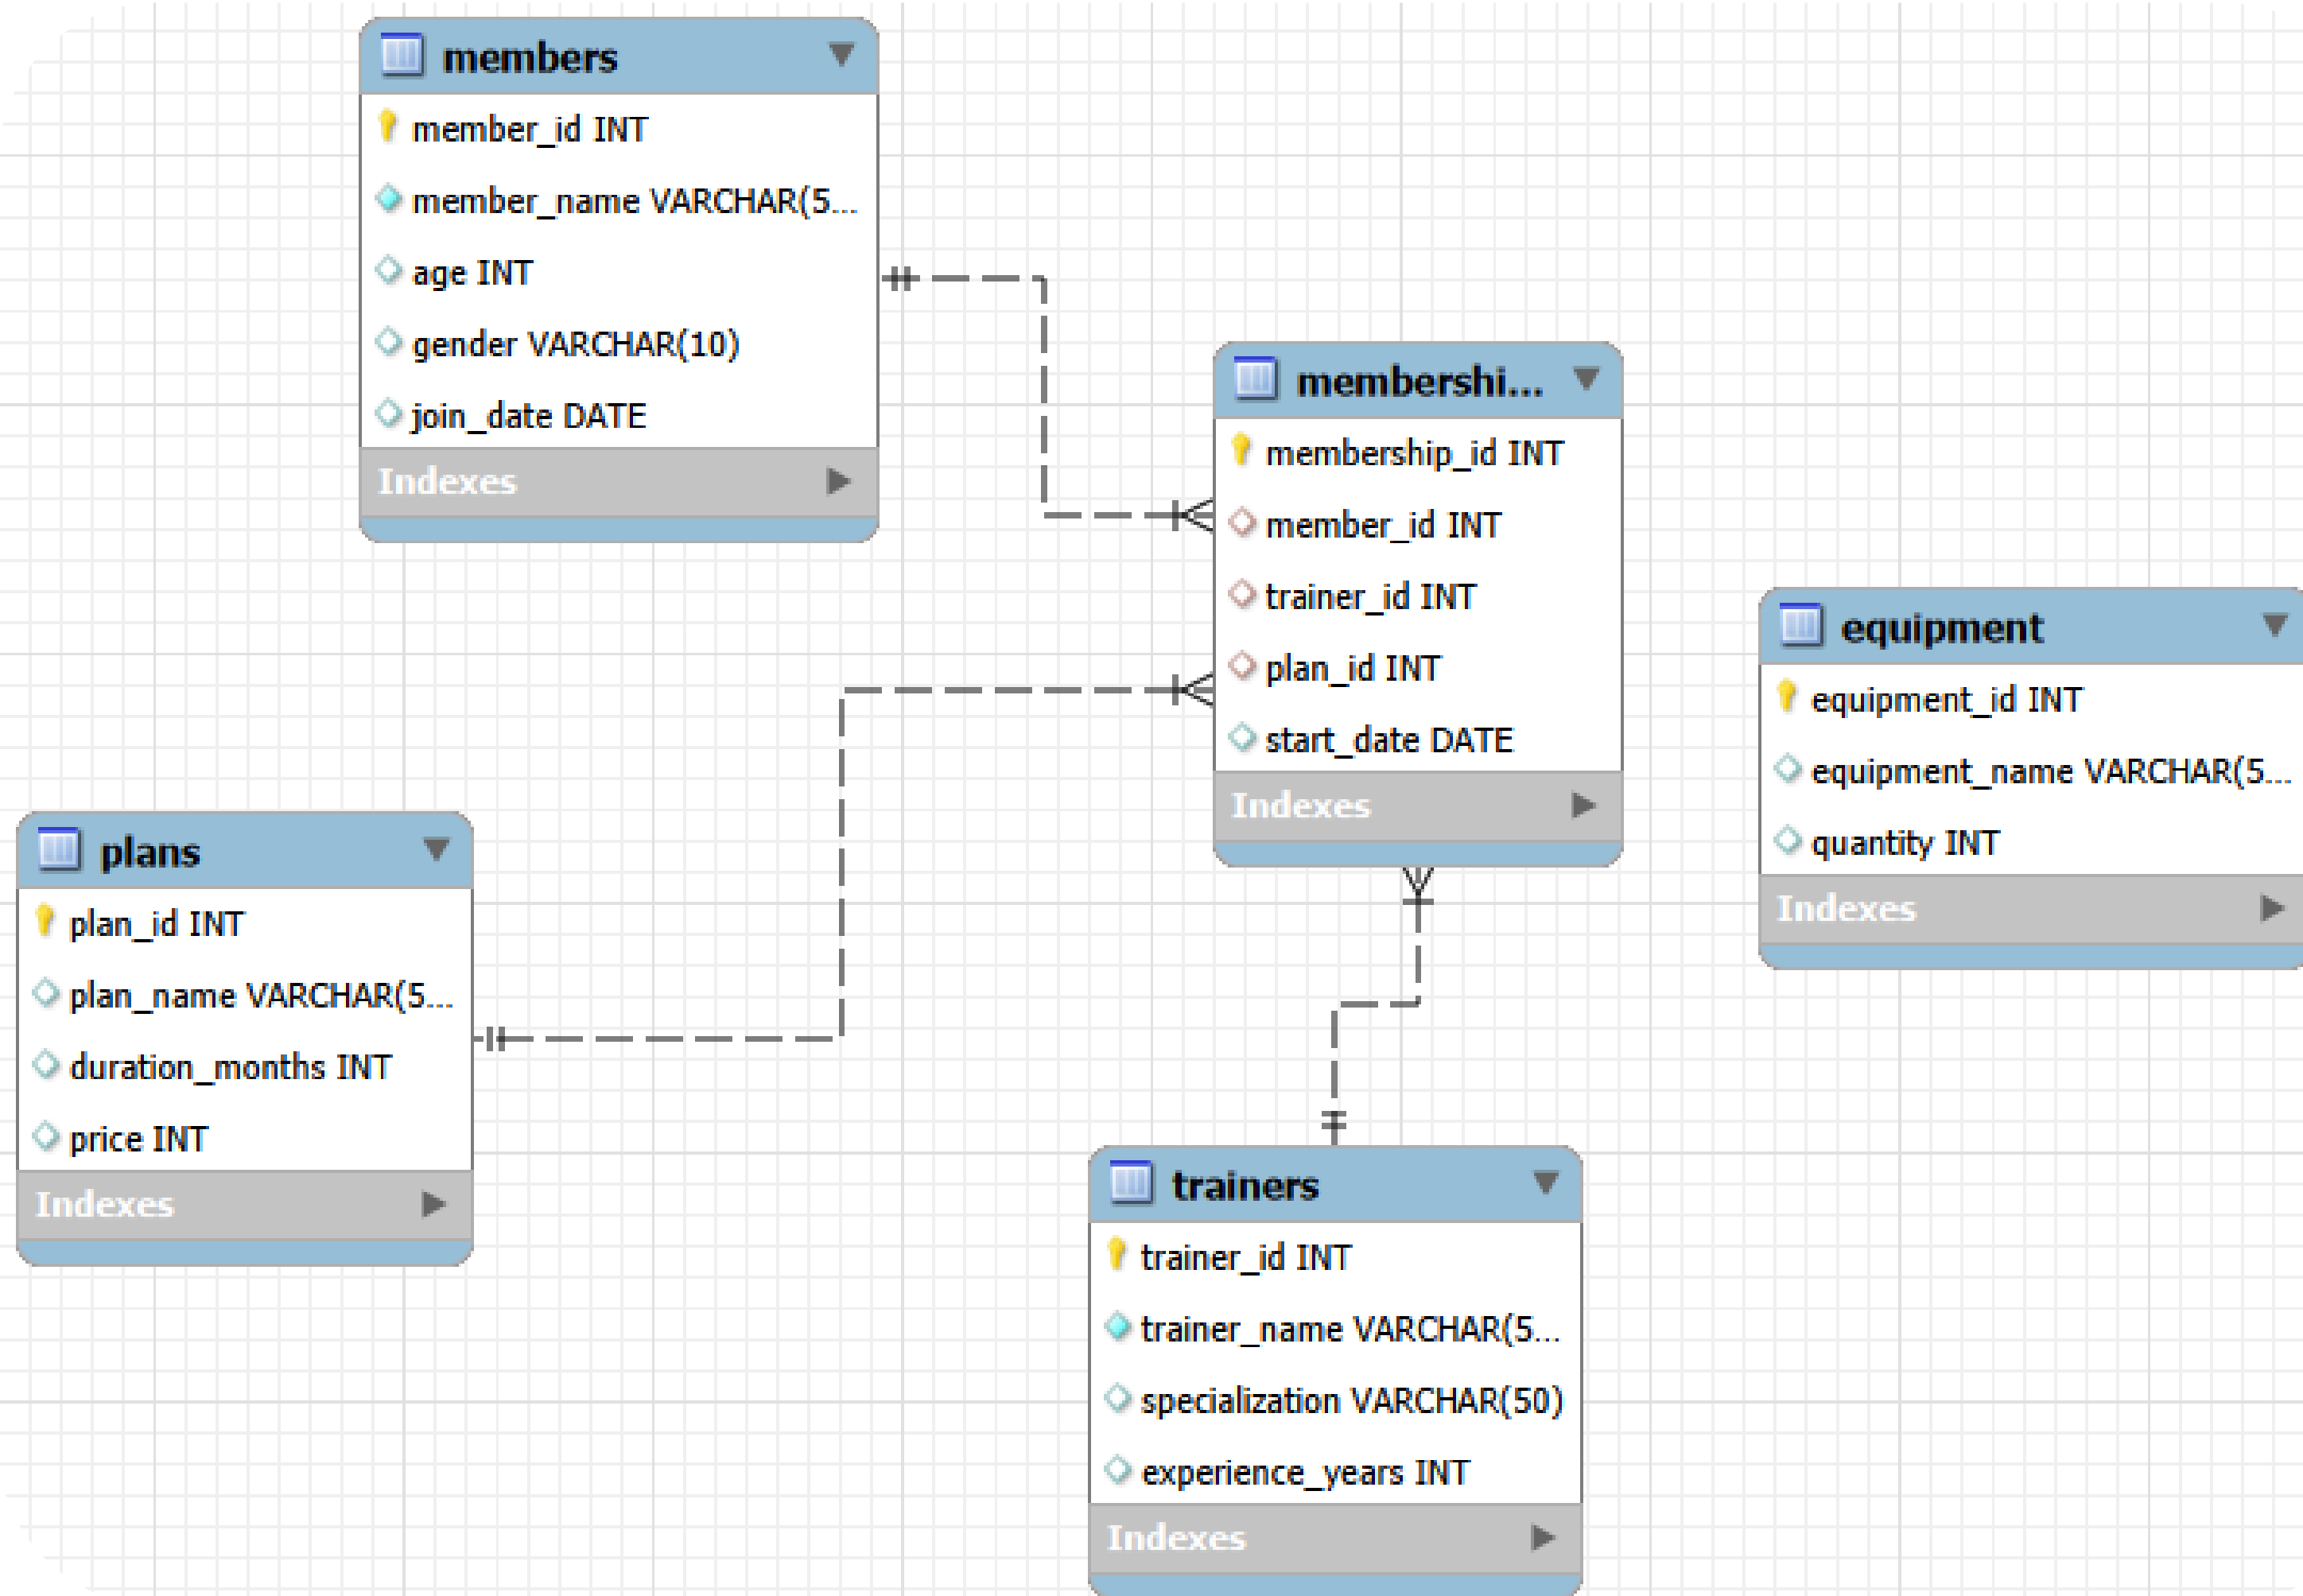

To manage trainer information in the gym.

To store member details and records.

To maintain gym plans and pricing.

To manage equipment availability.

To track memberships linking members, trainers, and plans.

```
102
103      -- QUERY 1
104      -- Display all members.
105  ●    SELECT * FROM members;
```

Insights

The Gym Management System helps analyze member enrollment, popular plans, trainer involvement, and equipment usage.

It makes it easy to retrieve important information quickly using SQL queries.

Conclusion

The Gym Management System organizes gym data efficiently using tables and relationships. It simplifies management of members, trainers, plans, and equipment, making operations faster and more accurate.

A high-angle, low-key photograph of a person's legs and arms as they perform a deadlift. The person is wearing dark shorts and athletic shoes with bright yellow-green accents. They are lifting a barbell with large black weight plates from a dark, textured rubber gym floor. The lighting is dramatic, with strong shadows and highlights, creating a gritty, athletic atmosphere.
